

JOINTLY OWNED NATURAL GAS

200 Dunbar Rd
Byron, GA 31008
478 654-6059

EXCESS FLOW VALVE NOTICE

Excess flow valves (EFV's) are mechanical shut-off devices that can be installed in the natural gas pipe, running to the gas meter at your property (the service line). An EFV is designed to shut off most of the flow of natural gas automatically if the service line breaks, for example, by an excavation accident. Stopping the flow of gas from a broken service line significantly reduces the risk of natural gas fire, explosion, personal injury and/or property damage.

You may request that the Jointly Owned Natural Gas install an excess flow valve on the service line to your property.

If you notify us that you want an EFV we will contact you to discuss your specific circumstances and the cost of installation and maintenance. EFV's cannot be installed on some service lines due to the high gas flow, low pressure or other factors. If you request an EFV, we will inform you if your service line can accommodate an EFV.

If an EFV can be installed on your service and you choose to have one installed, we will set up a mutually agreeable date when we will install an EFV on your service line.

You will be billed the cost to install the EFV, depending on the specific circumstances associated with your service line and property, the cost would be between \$1,000 and \$1,500.

If it becomes necessary to maintain or replace the EFV on your service line, you will be billed \$750.

Acceptance

I understand and accept the conditions and associated costs and request the installation of an EFV on my gas service line:

Printed Name: _____

Signature: _____

Date: _____

Service Address: _____

Rejection

I understand the conditions and associated costs but reject the offer for the installation of an EFV on my gas service line:

Printed Name: _____

Signature: _____

Date: _____

Service Address: _____
